ELECTRONIC VISIT VERIFICATION

CURES ACT PROGRESS OVERVIEW

December 2016
21st Century Cures Act passed

CURES ACT OUTCOMES

States will be required to have Electronic Visit Verification (EVV) implemented to receive federal funding for Medicaid.

Who has implemented EVV?

All states and territories that desire the full federal funding for Medicaid will have to implement EVV. Currently, 49 states, the District of Columbia, and Guam were granted Good Faith Effort Exemptions postponing their deadline. This delays the federal funding reductions by an additional year.

What does EVV track?

1. Identify the type of service being delivered
2. Identify the individual being served
3. Mark date of service
4. Location of delivery of service
5. Identify employee providing the service
6. Notates the time the service begins and ends

When is the EVV Deadline?

The original expected implementation deadlines are:
Personal Care Services (PCS) – by 2019
Home Health Care Services (HHCS) – by 2023.

Why is EVV important?

1. Improve the quality of information
2. Increase information gathering accuracy
3. Promote financial accountability
4. Reduce risk of abuse and neglect
5. Identify and prevent bad actors

Where is the EVV implemented?

How to implement EVV?

Typically one of three models is selected when implementing EVV. We can help navigate procurement and implementation for any design models and assist your program in achieving certification.

Closed Design

The entire state will use the EVV system selected by the Medicaid program at the Sate Level.

- State Choice
- State Developed

Open Design

Providers and MCOs are able to procure their own system of choice.

- Provider Choice
- MCO Choice

Hybrid Design

Most commonly selected design model

Providers and MCOs can elect to use the State's EVV system at no cost or find an alternative EVV vendor of their choice.

- Open Vendor
